## **DETAILED ACTION**

### ***Reasons for Allowance***

1. Claim 9 is allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

The present invention is directed to a method for automatic generation of a join graph for a relational database query that requires no special knowledge of the database schema or the relationships between tables in the database by a user initiating a query of the database.

Claim 9 identify the uniquely distinct step of:

“determining for each table in said one-dimensional/multi-dimensional list determined to be unmarked/marked a closest instance to a marked table in said hierarchical representation of said relational database and each ancestor of said instance; and generating a join graph from said marked instances of tables in said hierarchical representation of said relational database and said at least one attribute”.

In contrast, the closest prior arts, Hurst et al. (US Patent 6,721,754) discloses a substantially similar method of creating a join graph, but does not teach the use of a one-dimensional list and a multi-dimensional list as recited in the claim; and Dekimpe et al. (US Patent 6,665,682) similarly describes a method for storing tables in a relational database but does not teach the use of list in creating a join graph. Both Hurst and Dekimpe fail to anticipate or render the above-cited limitations obvious.

Thus, prior art of record neither renders obvious nor anticipates the combination of claim elements in light of the specification.
